

# green teen

Now is your chance as a Girl Scout to be in the forefront as an ambassador for the environment. During the overnight event, you can receive Environmental Ambassador training, participate in projects with environmental professionals, discover environmental science-related careers and learn about advocacy, and leadership and how you can make a difference in the world. Upon completion of the event, you will be ready to head back home to form your own "green team" and conduct an environmental project for your local community. This unique program is made possible through support from GSUSA and Lockheed Martin.
